Guidance for Enrolling University Students as Research Subjects

In some research situations, use of students is integral to a research protocol. This is particularly true of research into teaching methods, curricula and other areas related to the scholarship of teaching and learning. In the social and behavioral sciences, course credit is commonly offered for research participation.

An underlying principle of the regulations governing use of human subjects in research is that the subject’s participation is voluntary and based upon full and accurate information. The student-teacher relationship raises the issue of volunteer participation. Students may volunteer to participate in the belief that doing so will place them in a favorable situation with faculty (e.g., better grade, good recommendation, employment possibilities), or that failure to participate will negatively affect their relationship with the investigator or faculty (e.g. lower grade, less favorable recommendation, being "uncooperative and not part of the scientific community). Care should be taken to eliminate coercion or reduce undue influence when soliciting student participation in research.

The following guidelines are offered to assist faculty who engage in research projects in which students will be asked to be research subjects. Research conducted by graduate students in a class in which he/she teaches, assists, or does any grading are subject to the same restraints described below.

- **Independent Data Collection:** When research activities to be done by the students are not part of the required class activities, the instructor should arrange to have the data collected by an independent third party, so that the instructor does not know who participated and does not have access to the identifiable data or the identity of participants until grades have been assigned and entered. For instructors using pre- and post- tests to determine efficacy of a particular curriculum, a colleague or third party should obtain the consent forms and distribute the tests when the instructor is not present (a graduate teaching assistant in the class in which the student/subject is enrolled does not qualify as a third party for collecting the data on behalf of the instructor).

- **Extra Credit:** When course credit or extra credit is given to students who participate in research, students are to be given other alternatives for earning the research credit, for example; short papers, special projects, book reports, additional readings, research seminars, or completing a similar project. This requirement applies for any study in which an academic incentive is offered. Courses which require students to earn credits in a research subjects pool must also meet this requirement: If the subject pool does not offer equivalent non-research activities to earn credit, then the course instructor is obligated to offer an alternate activity credit option.

- **Extra Credit Alternatives:** These alternatives should be comparable in terms of time, effort and educational benefit to participation as a research subject to ensure that students are not being coerced into becoming subjects. Alternative options should not be graded so that full credit is given for completing the alternative. Likewise, penalties or deductions in credit may not be applied should an enrolled research subject choose to withdraw from a study (see OHRP determination letter). Alternatives offered to students need prior IRB approval, as do Department subject pools.

- **Non-Coercive Recruitment:** Solicitation of volunteer student subjects for research must be done in a non-coercive manner. To avoid undue influence, subjects should be recruited by a general announcement, central posting/announcement mechanism and should include a clearly written description of the project and a statement of the proposed student participation. In addition to being provided with the traditional information and consent forms, the student should also be provided with the name and contact information of a neutral third party to contact should they feel coerced at any time during the process.

- **Age of Majority:** Students should be of the age of majority in Kentucky (18 years old). Research involving minors (under 18 years of age) as subjects, (including 17-year-old college students)
generally requires a signed parental consent, as well as consent by the student. Some types of research may qualify for a Waiver of Parental permission.

- **Medical Center Students:** Prior to conducting any research involving Chandler Medical Center residents/house officers as subjects, the investigator must obtain the approval of the Graduate Medical Education Committee. Prior to conducting any research involving University of Kentucky College of Medicine students as subjects, the investigator must obtain the approval of the Office of Medical Education.

- **Permission to Access Student Information:** Generally, researchers may not access classroom performance evaluations, grades, and information in a student’s records without prior written permission from the student, regardless of the access an investigator may have in his/her academic role. The *Family Educational Rights and Privacy Act (FERPA)* protects privacy and confidentiality of personally identifiable information contained within student education records. For guidance on obtaining permission to access student records for research, see the [UK IRB FERPA Guidance](#) and the [UK Registrar FERPA Guidance](#). Resources for obtaining informed consent to use the accessed information for research purposes see the [Informed Consent](#) section of the IRB Survival Handbook.

- **Data Collection During Class:** Whenever possible, researchers should avoid data collection during regular class meetings. When study participation consumes a significant portion of a class section, loss of instructional time for both participants and non-participants may be considered a loss of benefits. Also when research participation is expected during regularly scheduled class sessions, students may be unduly influenced to take part due to peer pressure, perceived stigmatization from non-participation, or a sense of having otherwise wasted time by attending that day’s class.

- **Confidentiality Risks:** Since there are special risks of confidentiality in the close environment of the university, special attention should be given to full disclosure of these risks in the consenting of a student to participate in research. The plan for handling research data should also be designed to minimize the risk that confidentiality will be breached. When instruments call for the disclosure of information which participants may view as personal or sensitive, data should be collected in a manner that minimizes the chance of one participant learning the response of another.

- **Right to Withdraw:** Students must be allowed to withdraw from the study at any time. The informed consent statement should make clear the consequences of withdrawing from a project prior to completion. In general, it is favorable to give credit if the subject withdraws, unless withdrawal is immediate or there is evidence of bad faith on the part of the student.

- **Group Data Collection:** If the research is one where data are collected from a group project or perhaps a videotape of the group interaction, each student’s consent is necessary for the use of that data in the instructor’s research. If one student does not consent, the data may be used only if the non-consenting student’s data can be effectively excluded.

- **Right to Disclosure:** Students have the right to full disclosure of the research project as soon as possible. Whenever possible, a teaching opportunity in the form of an "educational debriefing" should be employed. Students should know something about the rationale for the study, the process of data collection, and intent of the researcher. In exceptional circumstances, the full or true purpose of the research may not be revealed to the subjects until the completion of data collection. In such cases, students must not be subjected to undue stress or embarrassment and must have the right to full disclosure of the purpose of the study as soon as possible after the data have been collected. During the debrief students should be given an opportunity to decide whether the researcher(s) can use the data collected.
