Subject: General Announcement: UK ORI wins Award for Excellence in Human Research Protection

To All,

Congratulations are due to the University of Kentucky (UK) Office of Research Integrity (ORI) for winning the [Health Improvement Institute \(HII\) Award for Excellence in Human Research Protection](#) in the [Best Practice](#) category for its online [Principal Investigator \(PI\) Self-Assessment \(SA\) form](#). The PI SA form is designed to educate the University's researchers on the mechanisms by which human subjects are protected. The self-assessment provides researchers an opportunity to improve human research protections performance of their own accord. The result of the self-assessment also provides useful information to the UK Office of Research Integrity (ORI) for identifying needed education/training initiatives for researchers, research staff, UK ORI staff, and Institutional Review Board members.

Winning the Best Practice Award demonstrates UK's excellence in promoting the well being of people who participate in research. For more details, see HII's press release [[PDE](#)].
