**Guidance for Enrolling K-12 Students as Research Subjects**

The Office of Research Integrity has developed a [guidance document](#) for enrolling K-12 students as research subjects, particularly when conducting research into teaching methods, curricula and other areas related to the scholarship of teaching and learning. The guidance promotes methods to reduce risk of undue influence and outlines the necessary steps for obtaining facility approvals; requirements for parental permission, student assent or consent waivers; applicable privacy regulations and other protections for consideration when conducting research in this population. Investigators should refer to this guidance when submitting protocols that will enroll K-12 students.
