

## iPad Pop-up Blocker

There is a pop-up blocker, which is on by default, that blocks the “Display Form” button from opening the form in a new window (so you don’t lose the work item in the UWL). Below is the process for turning the pop-up blocker on/off.

1. From the iPhone/iPad home screen, open Settings.
2. In the left bar, find and tap on the Safari menu item.
3. In the main window, find the Block Pop-ups item and slide it to either ON (blocks all pop-ups) or OFF (allows all pop-ups).
