IACUC POLICIES, PROCEDURES, and GUIDELINES

ADOPTION OF ANIMALS DESIGNATED FOR RESEARCH

131.1 PURPOSE

This document establishes policies and provides guidelines for adoption of research animals from the University of Kentucky.

131.2 BACKGROUND

The Guide for the Care and Use of Laboratory Animals (1) and the Guide for the Care and Use of Agricultural Animals in Research and Teaching (3) discuss the termination of research animals at the conclusion of the research project. However, the Guide, the Ag Guide, the PHS Policy (2), and the Animal Welfare Act (4) are silent on the issue of private adoption of research animals for pets after a study has been completed or the animals are no longer required for research. The 9 CFR recordkeeping regulations and official policies offer institutions the option of developing and implementing an adoption policy. The Office of Laboratory Animal Welfare (OLAW) is supportive of the concept of adoption.

In certain cases of non-terminal research use of animals, breeding of extra animals or ordering and receipt of animals unable to be used in research, adoption into a private home shall be encouraged by the University of Kentucky IACUC. Adoption is done in consultation with the principal investigator and orchestrated through the unit responsible for the care and use of the animal. Adoption is at the discretion of the Attending Veterinarian and the clinical veterinarian(s) of the unit. For a research animal to be eligible for adoption the following conditions must be met:

- The animal must have not been subjected to a research major surgical procedure. Routine veterinary surgeries are exempted.
- The animal must not have been administered any drugs other than FDA-approved human or veterinary drugs or food supplements or pharmaceutically compounded veterinary drugs. If any FDA approved drugs have been administered to the animal the drug should be disclosed to the potential adopter.
- Animals which have been exposed to infectious agents/hazardous chemicals/etc. are not eligible for adoption.
- Transgenic or immune-suppressed animals cannot be adopted.
- Animals must be adopted as personal or family pets only and may not be sold.
- Animals must not be used for food (human or animal consumption).
- The animal must be in good health and of acceptable behavior.
- The adopter is responsible for any future medical care/support as may be required.
131.3 PROCEDURES

The IACUC recommends the following set of procedures:

1. The principal investigator must first indicate that the animal is not needed for research at UK, state that s/he has no knowledge of any fact that would make the animal inappropriate for adoption, and recommends the animal be offered for adoption. If the PI is aware of any conditions that may have an impact on the animal’s suitability as a pet, this must be communicated to the potential adopter.

2. The animal should first be offered to other Principal Investigators with an IACUC approved research protocol. If no researcher indicates a desire to use the animal, the animal will be considered for the adoption program.

3. If an individual indicates an interest in adopting an animal, the Attending Veterinarian and/or clinical veterinarian (or qualified designee) will meet/talk with that individual and conduct an interview to determine the reasons for the adoption and the person’s willingness and ability to provide for the animal’s welfare. The questionnaire attached as Appendix I is suggested to be completed by the veterinarian and adopter. Potential adopters will be screened by the veterinarian for their suitability, knowledge of the care of the type of animal, and qualifications.

4. A University of Kentucky state licensed veterinarian will conduct a physical exam of the animal, including blood testing if indicated, and other tests deemed necessary to determine whether the animal is a suitable pet. Vaccinations may also be administered as needed. Results of the exam and any test results should be furnished to the prospective new owner.

5. A transfer form should be filled out by the PI or designee transferring dog or cat ownership to the new owner. APHIS form 7006 (“Record of Disposition of Dogs and Cats”) should be completed. For other USDA regulated species, form 7020 (“Record of Disposition of Animals other than Dogs and Cats”) must be completed. Forms can be found at https://www.aphis.usda.gov/aphis/ourfocus/animalwelfare/SA_Publications.

6. Spaying, neutering, or other common surgical procedures may be performed prior to adoption, at the discretion of the veterinarian. If surgical procedures need to be performed solely in connection with the adoption, the veterinarian will attempt to ascertain if cost reimbursement is available from an appropriate source, such as from the adopting family or other sources. The individual desiring to adopt the animal should complete and sign an Animal Adoption Agreement; a suggested form is attached as Appendix II. The responsible UK department will retain the original of this agreement, and give a copy to the new owner as proof of ownership transfer.
7. On the day the Animal Adoption Agreement is signed the animal should be removed from the UK facility. Once the animal leaves the facility it is the possession of its new owner; the University will no longer be responsible for the animal, its care or any damage it may cause.

Suggested University of Kentucky Animal Adoption Agreement

Date: ____________________

I, ________________________________, am adopting the animal described below from the University of Kentucky, and agree to be fully responsible for its future care, treatment, actions, and well-being.

The animal described below has been examined by University of Kentucky veterinarian (Dr.______________) and has been determined to appear to be both clinically healthy and suitable as a companion animal except as noted below. I acknowledge and agree that (just as with any physical examination) this does not guarantee that the animal to be adopted has no health issues, but that none are known based upon that examination.

I have been given a copy of this University of Kentucky “Animal Adoption Agreement”. Having read this document, I attest that I understand the terms under which I take ownership of this animal and agree to fully comply with all the conditions of adoption. Additionally, I have had an opportunity to ask any health and husbandry-related questions and each question has been answered to my full satisfaction.

In accepting this animal, I agree to care for it in accordance with all applicable laws and regulations of my and/or the animal’s State/county/city/municipality of residence, including but not limited to having the animal spayed or neutered if applicable, vaccinated against rabies and registering the animal with local animal control officials as required. I further agree not to use this animal as a food source or religious object or for any commercial purpose, including but not limited to breeding and exhibiting. I will not sell this animal.

By signing this agreement, I acknowledge that I hereby release and indemnify the University of Kentucky, its trustees, officers, employees and agents from any and all liability and expenses resulting from this adoption. I understand that the University of Kentucky accepts no liability for the animal’s continuing care or veterinary treatment, or for any damages arising from my ownership of the animal once it has been removed from the UK facility.
